

Updating the Era-Sure website

www.erasuretrading.co.za · A one-page guide to making small changes yourself, with no coding.

YOUR FOUR ACCOUNTS

Pages CMS

app.pagescms.org

Where you edit. Sign in with GitHub.

GitHub

github.com

Stores the website and every change ever made.

Netlify

app.netlify.com

Publishes the site. Quote-form enquiries arrive here.

Search Console

search.google.com/search-console

How the site shows up on Google.

ADD A PHOTO TO A CATEGORY

1. Go to **app.pagescms.org**, sign in with GitHub and open **era-sure-website**.
2. Click **Product categories**, then the category (e.g. **Cables**).
3. Scroll to **Gallery photos** and click **+ Add**.
4. Click the **Photo** box. Open the folder with the **same name as the category**, then click **Upload** and choose your picture.
5. Fill in **Description of the photo**: one plain sentence about what's in it. Google reads this.
6. **Photo source**: choose *Era-Sure's own photo*.
7. Drag the photo up or down to change its position, then click **Save**.

CHANGE TEXT OR REMOVE A PHOTO

- **Text**: open the category, edit any box, click **Save**.
- **Remove a photo**: open its row in **Gallery photos**, use the bin/remove icon, then **Save**. Keep at least one photo.
- **Card photo**: the picture on the category's card on the home and products pages.
- **Items supplied / Brands**: one item per line. Use **+ Add** for a new line.

ADD A DELIVERY HIGHLIGHT

1. **Delivery highlights** → **Add an entry**.
2. Fill in the title, web address (e.g. **limpopo-cable-supply**), summary, location (province only), items and 1–8 photos.
3. Leave it on **Draft** until the customer agrees. Then set **Customer permission** to *Confirmed* and **Status** to *Published*.

AFTER YOU CLICK SAVE

- The live site updates in **about 2–3 minutes**. Refresh the page to see it.
- Not showing? Open **Netlify** → **Deploys**. Green *Published* means it's done; red *Failed* means something was rejected.
- **A failed save cannot break the site**. The previous version stays live. Undo your last change, or send Timm a screenshot of the red deploy.
- Every change is saved in GitHub history, so nothing is ever truly lost.

PHOTO TIPS

- Use **JPG or PNG**. iPhone photos are often **HEIC**, which won't upload. Set iPhone → Settings → Camera → Formats → *Most Compatible*, or send the photo to yourself on WhatsApp or email first.
- Landscape (sideways) photos look best. Use good light and a clean background.
- Only use photos you took or own. Never use pictures from Google or supplier websites.
- Blur or crop out faces, number plates and customer names, unless the customer has agreed.

LEAVE THESE TO THE DEVELOPER

- New pages, new categories or layout / design changes
- Videos, and stock photos (these need licence credits)
- Anything in Netlify's **Domain** or **Build** settings
- Changing a web address that is already published
- The phone number, email and address in the site footer
- A save that fails twice in a row
